# Chapter 1

## Introduction

For my Final Year Project, I have decided to base it on a Hotel Front Desk System. From my several years as working as a hotel receptionist I have decided to base my project on this. Having worked with PAMS and Opera, I have a good knowledge of using these Systems, and what I believe would be improvements and variations that could make them more user friendly and modern. From my own experience of these systems I find them extremely bulky, and the User Interface is very unpleasing and dated. For my project, I have designed a Front Desk System in React Native. With using React Native, I not only have learned alot of new skills from learning a new language, but have found it really interesting to see the capabilities of this language. With my project, one of the key features I wanted was a new, easy to use interface. Had I written my project in Java (which most Hotel Front Desk Systems are written in), C, Python or many others, I would have found myself having a much heavier project, with a real unfriendly interface.
